

Steab

The company

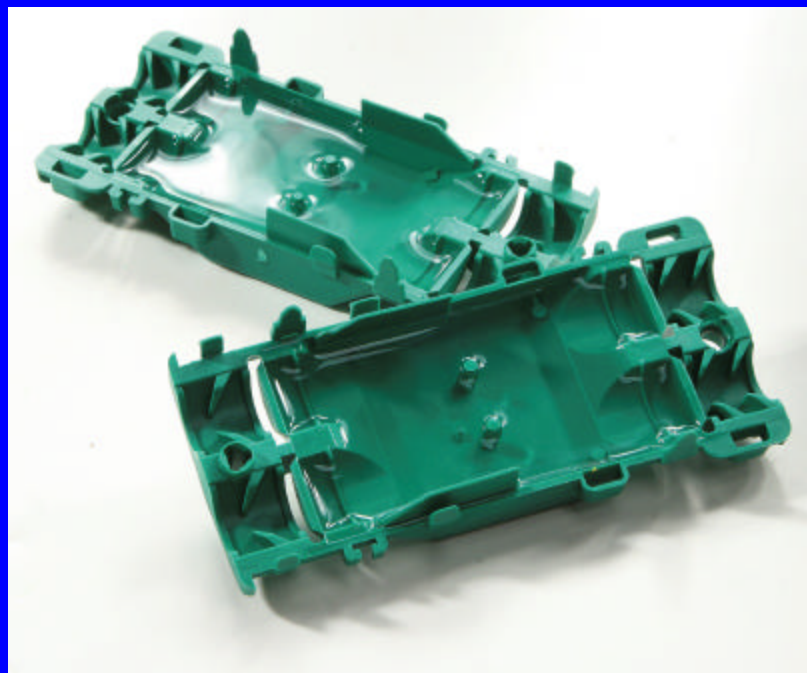

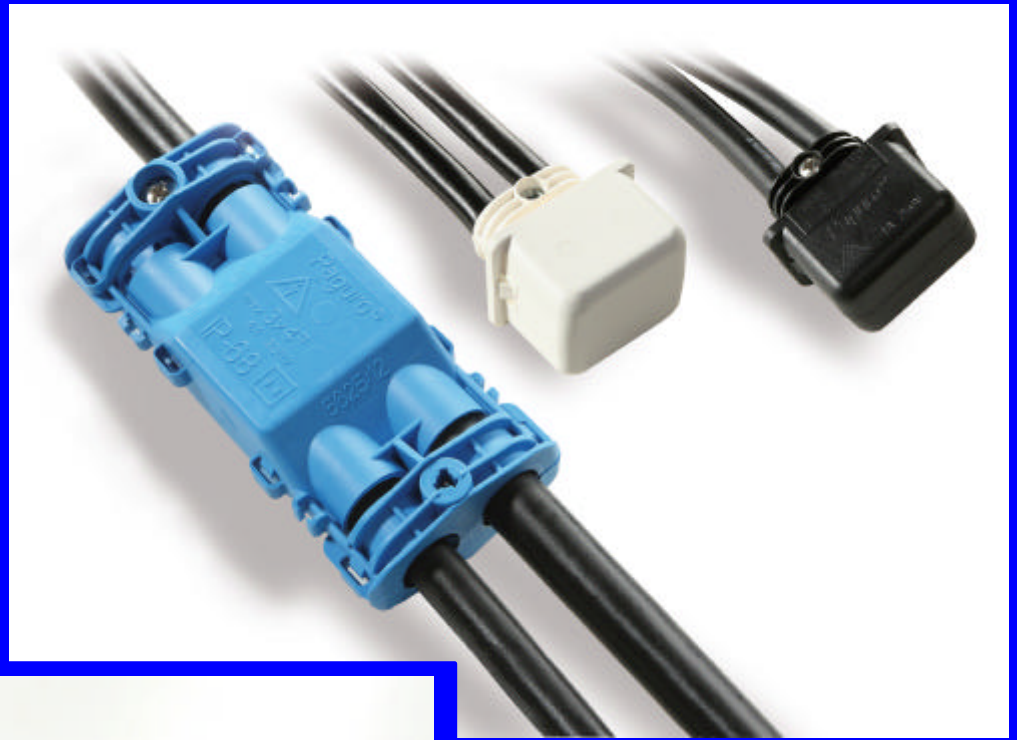

On the market since 1970, STEAB S.p.A. is a company specialised in the planning and production of plastic injection moulded components for industrial applications in the lighting - electronics - electromechanical sectors.

The latest novelty by Steab is the Paguro series, which has enjoyed considerable success among the manufacturers of outdoor equipment thanks to its easy assembly, the compact measurement of the box and the innovative insulation system using silicone GEL. Two new boxes have been added to the original range of IP68 protected junction boxes fitted with a cable clamp for cables with an external diameter ranging from min. 6.5mm to max 12.0mm. These provide IP68 protection for any external junction between two cables with 2 or 3 conductors. The Paguro series is aimed at the market traditionally interested in Steab products – the technical and decorative lighting sector – and is intended for the outdoor light manufacturer who has designed and built these products with the appropriate care so that they are protected for safe outdoor use: the Paguro series eliminates the risks of equipment damage caused by poor protection of the connection and adds value to the lighting itself.

Steab and Progetti di Luce

From the outset, Steab believed in this initiative. A lighting engineering industry can only exist in Europe if there is also a large capacity for research, innovation and development. For this reason, Steab has been willing to support this competition which aims to stimulate new ideas and involve “fresh” minds by suggesting new design and lighting forms.
